

Ashton Breer

|425-449-6520 |Ashtonbreer@yahoo.com|

EDUCATION

University of California, Irvine

Bachelor of Science in Computer Science

Expected Graduation: **June 2028**

PACCAR

Intern (full-time)

Summer 2026

- Developed **Python automation** solutions to drive **process improvement** and business process automation across Bill of Sale, contract, and purchase order workflows.
- Built **systems integrations** using Power Automate, Snowflake, Salesforce, and DocuWare REST APIs to automate data validation, document retrieval, and cross-functional business processes.
- Designed **data pipelines** and document-processing workflows to extract data from emails, Excel attachments, PDFs, and Word templates for automated document generation.
- Improved **operational efficiency** by reducing manual data entry, increasing processing accuracy, and streamlining workflows across finance and operations teams.
- Collaborated with **cross-functional stakeholders** to gather requirements, troubleshoot workflow issues, and support automation deployment and process optimization.

Target – Bellevue, Washington (full-time)

Style Consultant

Summer 2025

- Assisted customers in identifying needs and provided personalized solutions, improving problem-solving and communication skills.
- Collaborated with team members in a fast-paced environment, ensuring efficiency and teamwork.
- Managed multiple responsibilities simultaneously, demonstrating adaptability and time management.

PROJECTS

AI Sports Play Prediction Platform

August 2025 – Present

- Developed a full-stack React/JavaScript/FastAPI application that predicts NFL and NBA plays using Random Forest and XGBoost machine learning models.
- Built data processing pipelines with Python, pandas, NumPy, and scikit-learn to process 356K+ NFL plays and 16M+ NBA events.
- Develop REST API functionality and interactive Three.js visualizations for real-time game situation analysis.

K-Nearest Neighbors Classifier

[GitHub](#)

February – March 2025

- Implemented a K-Nearest Neighbors (KNN) classification algorithm in Python using pandas and NumPy.
- Optimized Euclidean distance calculations with NumPy, reducing computation time by 40% while achieving 80% classification accuracy.
- Built an end-to-end machine learning pipeline with data preprocessing, configurable k-values, nearest-neighbor search, and majority-vote classification.

Grin Language Interpreter

[GitHub](#)

May – June 2025

- Implemented a custom interpreter in Python that parses and executes a Grin programming language with 13 commands, including variables, loops, and subroutines
- Built lexical analysis and parsing system using object-oriented design to support 6 comparison operators and control flow
- Built label resolution system that maps program labels to line numbers for jump target execution across the codebase

SKILLS

Languages: Python, SQL, C++, HTML

Frameworks & Libraries: FastAPI, React, scikit-learn, pandas, NumPy, Three.js

Tools & Technologies: Git, GitHub, REST APIs, Power Automate, Snowflake, Salesforce, DocuWare, Power BI, Tableau, Azure, SharePoint, Linux, VS Code

Concepts: Software Engineering, AI Automation, Process Improvement, Business Process Automation, Systems Integration, Backend Development, REST APIs, Data Pipelines, Testing & Debugging, Machine Learning, Cross-Functional Collaboration, Operational Efficiency, Requirements Gathering, Data Validation
